

How Our 10 Year Bulb Life is Possible?

Green Lighting Eco Products produce some of the most efficient light fixtures in the world!

- ▶ Each fixture is engineered to ensure the correct bulb and airflow is used to maximize life.
- ▶ Each bulb or fixture has built in surge suppression. (Helps eliminate bulb burnout from electrical problems)
- ▶ Each piece of glass is engineered to ensure heat is allowed to escape to maintain safer cooler fixtures.
- ▶ Each fixture is heat tested to ensure the fixture remains under 35°C and the bulbs remain at under 90°C at all times, even if on consistently. (Heat greatly reduces a bulbs life)
* Green Lighting Eco Products Flushmount fixtures run at less than 59°C at their hottest spot *

We will replace any Green Lighting Eco Products bulb that burns out from 10 years purchase.*
